**ANALYSIS OF THE RESULTS OF SOCIOLOGICAL SURVEY  
OF THE PATIENTS OF DAY PATIENT DEPARTMENTS  
OF MEDICAL ORGANIZATIONS IN ALMATY (KAZAKHSTAN)**

**Abstract.** This work provides and shows the dynamics of development of hospital-replacing forms of medical care and makes estimations in accordance with the methods, generally accepted in medical statistics.

**Key words:** hospital-replacing medical care (HRC), day hospital (DH), hospitalization replacement technologies.

**Introduction.** Modern requirements to the implementation of national health programs require the application of resource-saving technologies new to national health care system, that allow to reduce the expenditures for unreasonable hospitalization, to rationally use costly bed space in hospitals and improve patients' quality of life [1-5].

To explore key organizational, financial and clinical issues of the delivery of hospital-replacing medical care (HRC) to population at the level of outpatient sector and to determine the main directions of their solution, complex social-hygienic research was performed [6-12].

Aims of investigation: evaluation of development of HRT in Almaty, Kazakhstan.

The object of investigation - day hospitals.

**Materials and methods of investigation.** A cross-sectional, full-design study was performed in day hospital (DH) of 3 outpatient institutions (OI) of Almaty in patients above 18.

Outpatient institutions with day patient departments with maximum number of DH beds were selected as subject to density of the assigned population.

Total number of respondents, selected randomly, who participated in questionnaire - 1670.

According to the stated goals and tasks we carried out the sampling of medical organizations according to the criteria of inclusion and exclusion from the study.

Inclusion criteria - patients undergoing DH treatment, recently discharged from DH, receiving outpatient aftercare.

**The results of research and discussion.** Study of respondents' choice of the most convenient forms of medical care showed that  $65.9 \pm 1.2\%$  (Figure 1), of respondents treated in day hospital under outpatient institutions preferred treatment in day hospital, 56% of them are working-age population aged «18-59».

Results of analysis of respondents' satisfaction with hospital-replacing medical care quality showed that out of  $56.9 \pm 1.2\%$  (Figure 2) satisfied respondents  $51.5 \pm 1.2\%$  noted improved quality of care, while out of  $43.1 \pm 1.2\%$  «not fully» satisfied respondents  $29.9 \pm 1.1\%$  also noted the improvement in quality of medical care, but  $19.8 \pm 1.2\%$  respondents expected date of planned hospitalization in day hospital over a month (1-6 month) ( $p < 0.0001$ ) (Figure 3).

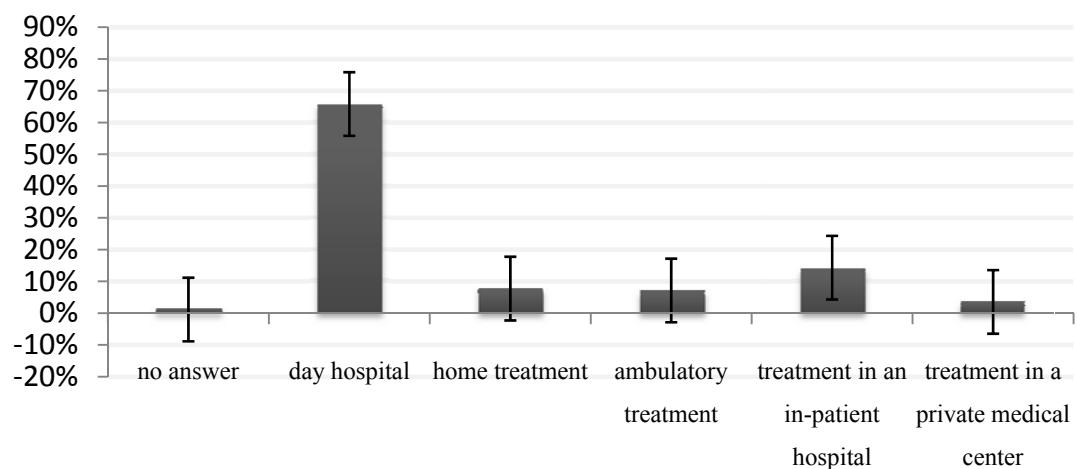

Figure 1 – Choice of respondents' of the most convenient forms of medical care

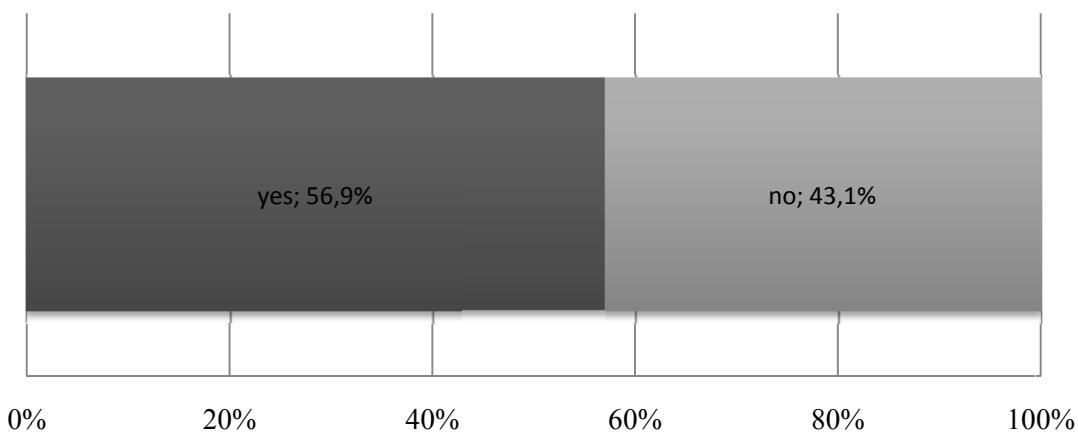

Figure 2 – Satisfaction of respondents' with hospital-replacing medical care quality

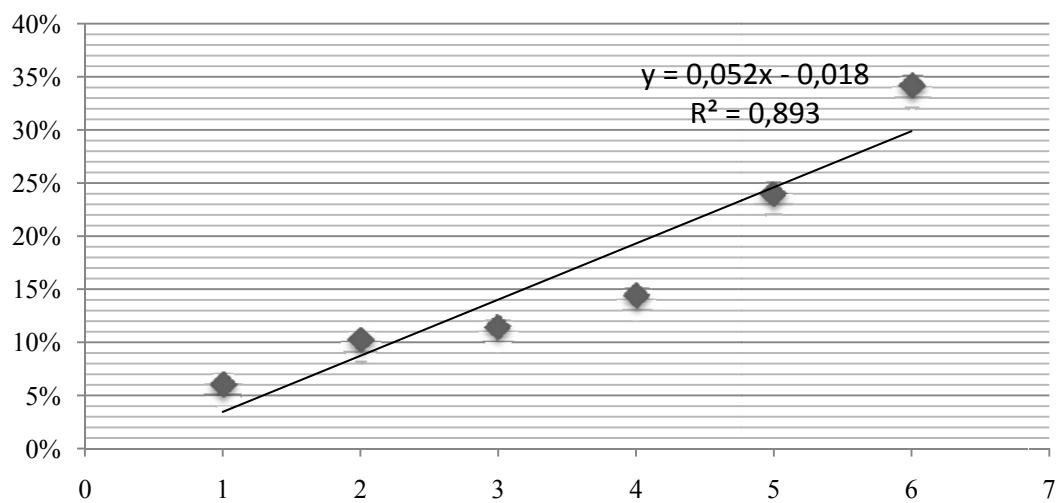

Figure 3 –Expected date of planned hospitalization in day hospital

To assess mutual influence of factors on level of respondents' satisfaction with hospital-replacing medical care quality, linear regression analysis of interrelation was conducted.

Patients' satisfaction with quality of HRC was correlated with expenditures for medicine during the treatment in day hospital ( $F_{kp}=6.268$ ).

During treatment 29.34% spent more than 5000 tenge for medication, about 20% - up to 5000 tenge.

#### Linear regression analysis

Predictors (X) (M, SD)	b=	a=	R^2=	Fobs=	R^2,%	95%CI
Expenditures for medicine during the treatment in DH M=1.46 SD=0.49	1.79	-0.25	0.061	6.268	6.1	1.44-1.49

65.87% of respondents are ready to recommend day hospital to their relatives, friends and acquaintances. Frequency of respondents' medical resource utilization has a statistically significant correlation with reasons of the respondents' non-utilization of outpatient service  $p<0.0001$ , and with respondents' recommendations of day hospital to their relatives  $p=0.0016$ .

**Conclusions.** Formation of a sense of trust in a patient in the specialist and treatment in DH, and generally in the clinic, is an important sign of the successful and effective organization of medical care and a financial success of health care system.

Contributory factors of hospital replacing medical care that influence the patients' satisfaction level were determined.

**Acknowledgements.** The authors would like to thank all the study participants. All authors have seen and approved the final version. Conflicts of interest: None declared.

**Аннотация.** В работе показана динамика развития стационарозамещающих форм медицинской помощи. Проведены расчеты показателей в соответствии с общепринятыми в медицинской статистике методиками.

**Ключевые слова:** стационарозамещающая медицинская помощь, дневной стационар, стационарозамещающие технологии (СЗТ).

## **Publication Ethics and Publication Malpractice in the journals of the National Academy of Sciences of the Republic of Kazakhstan**

For information on Ethics in publishing and Ethical guidelines for journal publication see <http://www.elsevier.com/publishingethics> and <http://www.elsevier.com/journal-authors/ethics>.

Submission of an article to the National Academy of Sciences of the Republic of Kazakhstan implies that the described work has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see <http://www.elsevier.com/postingpolicy>), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. In particular, translations into English of papers already published in another language are not accepted.

No other forms of scientific misconduct are allowed, such as plagiarism, falsification, fraudulent data, incorrect interpretation of other works, incorrect citations, etc. The National Academy of Sciences of the Republic of Kazakhstan follows the Code of Conduct of the Committee on Publication Ethics (COPE), and follows the COPE Flowcharts for Resolving Cases of Suspected Misconduct ([http://publicationethics.org/files/u2/New\\_Code.pdf](http://publicationethics.org/files/u2/New_Code.pdf)). To verify originality, your article may be checked by the Cross Check originality detection service <http://www.elsevier.com/editors/plagdetect>.

The authors are obliged to participate in peer review process and be ready to provide corrections, clarifications, retractions and apologies when needed. All authors of a paper should have significantly contributed to the research.

The reviewers should provide objective judgments and should point out relevant published works which are not yet cited. Reviewed articles should be treated confidentially. The reviewers will be chosen in such a way that there is no conflict of interests with respect to the research, the authors and/or the research funders.

The editors have complete responsibility and authority to reject or accept a paper, and they will only accept a paper when reasonably certain. They will preserve anonymity of reviewers and promote publication of corrections, clarifications, retractions and apologies when needed. The acceptance of a paper automatically implies the copyright transfer to the National Academy of Sciences of the Republic of Kazakhstan.

The Editorial Board of the National Academy of Sciences of the Republic of Kazakhstan will monitor and safeguard publishing ethics.
